Education

Delhi Technological University — Delhi, IN
M.Tech in Computer Science & Engineering — *Jul 2020*

Technical Skills

Languages	:	TypeScript, JavaScript, Go, Python, Ruby, PHP
Frontend	:	React.js, Next.js, Redux, HTML5, CSS3
Backend	:	Node.js, Nest.js, Express.js, REST APIs, Microservices
Databases	:	MySQL, PostgreSQL, Elasticsearch, Redis
AI & Automation	:	OpenAI APIs, Prompt Engineering, Agentic Workflows
Cloud & DevOps	:	Docker, Kubernetes, GCP, Git, CI/CD, KEDA, New Relic

Experience

HackerRank: AI-powered developer skills platform — Apr 2024 – Apr 2026
Software Engineer II - Full Stack — *Remote, IN*

Tech: Node.js, TypeScript, React, Next.js, Python, PostgreSQL, Elasticsearch, Redis, AWS

- Designed and developed scalable backend services using Node.js and TypeScript for HackerRank Engage, powering enterprise hiring workflows and recruiter-facing features.
- Built a configurable email campaign platform enabling recruiters to create personalised invitation and reminder campaigns with dynamic content injection, automated scheduling, and Postmark integration.
- Developed analytics services by integrating the Google Analytics Reporting API, enabling event organisers to monitor microsite engagement and user activity through actionable insights.
- Built Python automation pipelines using OpenAI Batch API to extract candidate roles and skills from large datasets at scale.
- Consolidated data from ContactOut, PDL and an existing Elasticsearch cluster into a new cluster, developing ingestion pipelines, optimising mappings, re-indexing datasets, and validating data integrity; regenerated ML embeddings to power semantic search.
- Designed and implemented RESTful APIs supporting university hiring workflows, collaborating with frontend engineers to ensure seamless React integration.
- Built AI-powered agent workflows to automate vulnerability assessment and remediation, improving engineering productivity and security operations.
- Led the migration of a high-volume email storage table by resolving database collation inconsistencies, enabling full emoji support across multiple production services without service disruption.
- Refactored workflow execution and implemented monitoring, improving reliability and reducing incident resolution time.
- Served as the on-call engineer for critical production systems, resolving high-priority incidents while maintaining platform reliability.
- Implemented alerts to capture and monitor workflow failures, enabling faster debugging and better visibility for the team.

Vimeo: AI-powered video platform — Jul 2021 – Mar 2024
Software Engineer II — *Bangalore, IN*

Tech: React.js, Next.js, Node.js, PHP, Python, Redis, GCP

- Designed a private upload workflow that reused existing media assets and metadata, eliminating redundant transcoding and significantly improving upload efficiency.

- Delivered a demo video creation feature through experimentation, enabling users to generate video clips without uploading new media, improving product activation, and using Psalm for robust static analysis to prevent errors in a complex PHP project.
- Developed in-house CMS on top of **Builder.io** to enable the marketing team to update/build website content without engineering support.
- Integrated reusable React components with Builder.io APIs, enabling rapid page creation and content management.
- Led a growth initiative to optimise user registration across multiple services, building multiple reusable modal variants and integrating them across React and PHTML experiences, resulting in a 10% increase in registrations.
- Improving website SEO (used multiple JSON-LD schema, **JobPosting** schema).

Vimeo Jan 2021 – Jul 2021

Software Engineering Intern *Remote, IN*

- Implemented new features/pages for the marketing team by following Vimeo's design guidelines and Figma prototypes.
- Improving website conversion rates through effective **A/B testing**.
- Analysed user behavior using **Amplitude** analytics to identify areas of improvement and implement data-driven decisions.
- Migrated legacy React pages to Next.js, improving Lighthouse performance scores and web performance metrics including LCP and TTI, while reducing page load times.
- Fixed bugs in the core backend.
- Leveraged a range of React capabilities, including code splitting, lazy loading, hooks, and error handling, to elevate the application's capabilities.

Samsung Research Institute Jan 2020 – May 2020

Engineering Intern *Noida, IN*

- Part of Service R&D team.
- Learned and implemented many industry-related tools and Practices - REST APIs, GIT, Android Studio.
- Primarily worked on understanding the Samsung Internet browser codebase and adding new features.
